

## PRODUCT DETAILS DOCUMENT

# Clinic, laboratory and pharmacy — on one counter.

ClinicNP runs the front desk of a Nepali polyclinic: patients and their visits, doctors and their shares, samples followed all the way to the report, medicines by batch and expiry, and one bill that carries all of it. Bikram Sambat throughout, and it keeps billing when the internet stops.

## OVERVIEW

# One system, two halves, one counter

A clinic and a pharmacy have the same problem at the same desk: a queue of people, a paper register, and software written for a supermarket. ClinicNP is one system with two halves that share one counter, one invoice series, one patient and one set of books. Each half is switched on or off on its own, and switching one off never deletes anything.

### Clinic

The patient exists here. Register once, keep every visit, bill the consultation, the ultrasound, the ECG and the lab test, and keep the report that comes back.

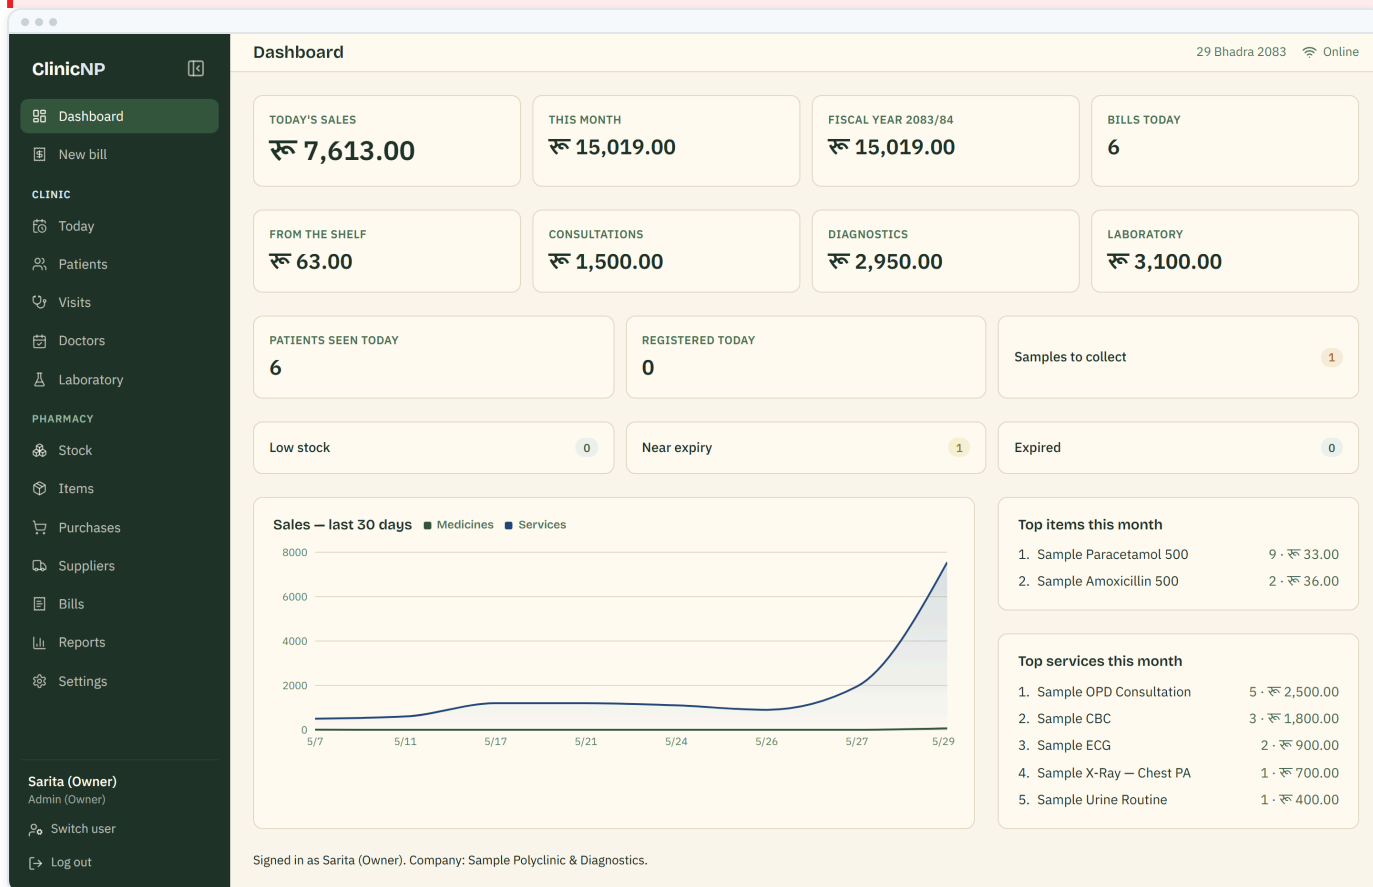

- Patient records
- Visits & today's list
- Samples & reports
- Appointments
- Doctor shares
- Files against a visit

### Pharmacy

Medicines sold by the tablet, strip or box. Batch and expiry decide whether stock is an asset or a write-off, oldest-expiry-first is the default, and expired stock cannot be sold at all.

- Stock by batch
- Expiry warnings
- Purchases
- Suppliers & ledgers
- Stock out with a reason
- Shelf map

↓ **Both switched on** is the interesting case — one counter, one invoice that carries medicines and services together, one dashboard, one set of books.

The dashboard with both halves on — the day's money split into medicines, consultation, diagnostics and laboratory, and the queues that need attention.

WHY CLINICNP

## What makes it different

### One bill for everything

A consultation, an ultrasound, two lab tests and the prescription — one invoice, one number, one payment, one set of books.

### Samples followed to the report

Collected, sent, back, handed over. Five worklists, each stamped with a time, so "has that one gone yet?" has an answer.

### The counter survives the internet

Billing and patient registration carry on with zero connectivity for a full business day, then reconcile by themselves.

### Built for a keyboard

One search box finds a medicine or a service. Every counter action has a key, and shows the whole sheet.

### Bikram Sambat, everywhere

BS dates on every screen, register and report. The year runs Shrawan to Ashadh, and closed years stay readable forever.

### Doctor shares worked out

A percentage of the consultation, a fixed amount, or a share of listed services — calculated per line, totalled into a payout sheet.

### The outside lab, accounted for

What you billed, what the partner charges, the margin between them, what you have paid and what is still owed.

### Nothing is quietly lost

Bills are never deleted, visits are cancelled with a reason, and every override, merge and deletion is signed and logged.

### Anybody found in seconds

By name, phone or patient number — with their whole history and every attached report on one card.

### A bill leaves the counter in seconds

medicines, services, or both — from the keyboard

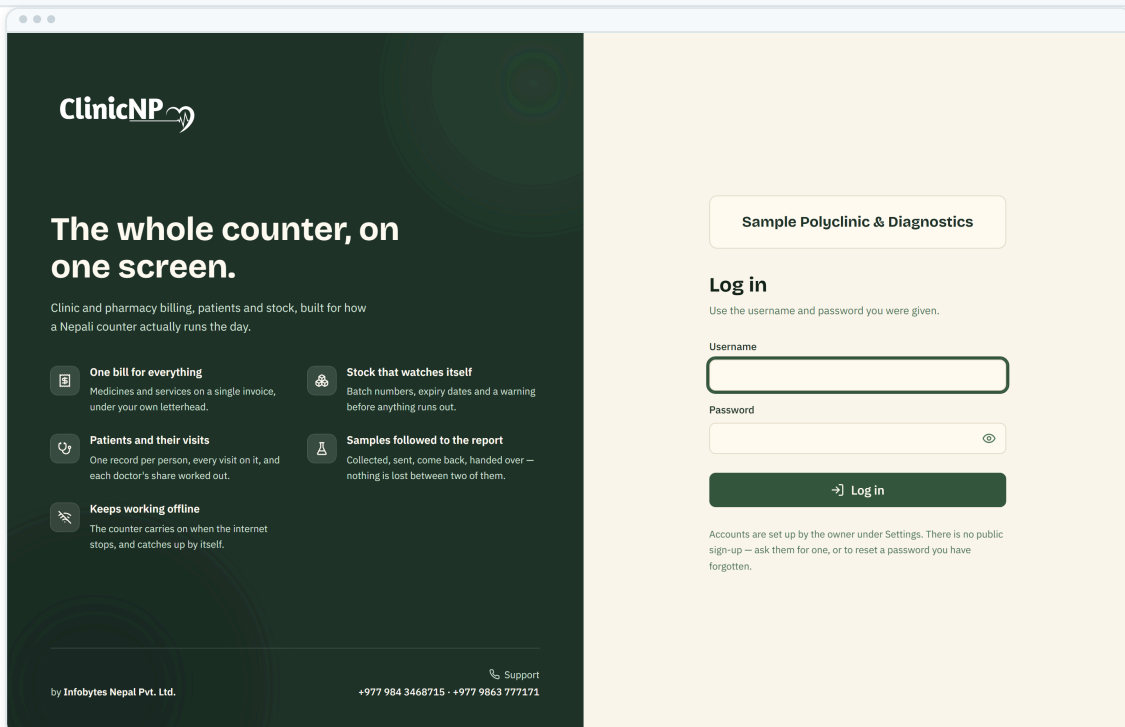

### A patient from eighteen months ago is found on the first try

with every visit, bill and file attached

### Last year's register prints unchanged

after the year is closed, forever

The front door. The clinic's own name sits above the login, and the product says on it exactly what it claims to do.

## THE MAP

# Every tab, and what lives in it

The sidebar groups itself by module. With both halves on it reads top to bottom the way the day runs: the counter first, the clinic, the pharmacy, then the money and the settings.

### ⌚ ALWAYS ON

#### Dashboard

the day's money, the queues, what needs attention

#### New bill

the counter — medicines, services, or both

### 🏥 CLINIC

#### Today

everyone registered today, their doctor and their status

#### Patients

one record per person, for life — with duplicate detection

#### Visits

every encounter, its complaint, vitals, findings and advice

#### Doctors

appointments, arrivals, and the doctor's own screen

#### Laboratory

five worklists, from collection to handing the report over

### 💊 PHARMACY

#### Stock

current, low, near expiry, expired, stock out, opening, shelves

#### Items

the medicine list, its units and its prices

#### Purchases

stock coming in, and going back to the supplier

#### Suppliers

who you buy from, and what you owe them

### 💰 MONEY & CONTROL

#### Bills

every sale, reprint, cancel, refund and credit settlement

#### Reports

fifteen registers and reports, every one exportable to Excel

#### Settings

company, services, doctors, laboratories, users, years, backup

## THE COUNTER

# One search box, one bill

#### Type once, find anything

medicines and services in the same box — each tagged, so a mixed bill reads clearly

#### A service needs a patient

attach one or register them inline; a medicine-only bill can stay anonymous

#### Sold by box, strip or tablet

with its own rate at each level, and a picture of the quantity you picked

#### Hold and resume

a bill can wait while the next person is served

A consultation and a prescription on one bill. Services sit in their own block with the doctor on the line; medicines carry the unit picker, the batch and the rate.

 **Expired stock cannot be sold**  
no override, ever — and overselling is blocked outright

 **Oldest expiry leaves first**  
chosen automatically, overridable per line when a batch must be picked by hand

 **An edited rate is marked**  
the line shows it, and the change is signed and logged

 **Cash, QR or credit**  
with tendered and change, and credit settled later from the bill register

The visual quantity picker draws the medicine in its real shape — a strip of ten, a bottle, a tube — so the person at the counter can see the quantity rather than trust a number.

## PATIENTS One person, one number, one history

- # **A number for life**  
P-000001 onwards — sequential, never reused, never reset at year end
- 🎂 **Age the way a clinic records it**  
years, months and days, stamped with the date it was recorded, so it never shows a wrong age later
- ⚠️ **Allergies in red**  
a known allergy or a standing note is a red strip across the card
- 📄 **Duplicates offered, not created**  
a matching name and phone is caught on save; merging is the owner's call, and is logged

Possible duplicate patients

29 Bhadra 2083 Online

These records share a name or a phone number. That does not make them the same person — households share phones, and names repeat — so nothing has been joined. Open a pair to compare them, and join them only if they really are one person.

| One record                                                 | The other                                                  | What matches             |                  |
|------------------------------------------------------------|------------------------------------------------------------|--------------------------|------------------|
| Sample Anita Shrestha<br>P-000001<br>9800000001 · 2 visits | Sample Anita Shrestha<br>P-000011<br>9800000001 · 0 visits | Same name and same phone | Compare and join |

Two records for one person. The system shows what it thinks matches and leaves the decision to the owner — merging moves every visit, bill and file onto the record that is kept.

VISITS

# The day, and what happened in it

## Today's list is the front desk's home

everyone registered today, their doctor and department, and whether they are waiting, seen or closed

## Vitals if you want them

BP, pulse, temperature, weight and SpO<sub>2</sub> — all optional, no charting, no pressure

## A number per year

V-2083/84-000001, restarting with the fiscal year

## Free text, on purpose

complaint, findings and advice as prose; most doctors keep writing on paper, and the system does not punish that

What brings them in

Fever and body ache for 3 days

Findings

Throat congested. Chest clear.

Advice

Paracetamol SOS. Review if fever persists beyond 48 hours.

Save visit

Cancel visit

One visit: who, which doctor, the complaint, the vitals that were taken, and the findings and advice written against it.

## LABORATORY

# A sample followed all the way to the report

A test used to be billed and then vanish from view, which left the question a clinic asks twenty times a day — *has that one gone yet? is the report back?* — with no answer anywhere except somebody's memory. ClinicNP stamps each stage with a time, so the worklist says not only where a sample is, but when it got there and who had it last.

1

### To collect

billed, nothing drawn yet

2

### To send

collected, waiting to go out

3

### Awaiting report

gone to the laboratory

4

### Report in

back, waiting for the patient

5

### Given out

handed over — done

### Grouped by what has to be collected

blood, urine, stool, swab, sputum and the rest — one trip to the patient, not four

### Waiting days counted

anything sitting too long turns red on its own

### Why a sample is stuck, in words

haemolysed and being redrawn, the patient never came back, the lab rejected it

### A dispatch slip goes with the sample

patient, tests, referring doctor, partner laboratory, and a collection line

Given to patient

Reports that have come back, and the ones still outstanding against a billed test.

**Said plainly, so there is no surprise later.** ClinicNP bills a test, follows the sample, and keeps the report that comes back against the patient's visit. It does not enter results, produce report cards, hold reference ranges, or talk to an analyser — that is a laboratory information system, and it is a different product. What ClinicNP runs is the counter around the laboratory: who was billed, what was collected, where it went, what came back, and who owes whom.

## LABORATORY What the partner lab is owed

**Both sides of every test**  
what the patient was billed, and what the partner laboratory charges for it

**The margin, stated plainly**  
billed minus partner cost, per test and per period

**Payments and a running balance**  
each settlement recorded, with what is still owed today

**Per partner or consolidated**  
on screen, printable, and exportable to Excel

| 2083-05-25 | Paid — bank · Part settlement | —        | ₹ 1,000.00 | ₹ -200.00  |
| 2083-05-29 | Sample Liver Function Test    | ₹ 900.00 | —          | ₹ 700.00   |
| 2083-05-29 | Sample CBC                    | ₹ 400.00 | —          | ₹ 1,100.00 |
| 2083-05-29 | Sample Renal Function Test    | ₹ 850.00 | —          | ₹ 1,950.00 |

The laboratory statement. Tests sent, billed to patients, the margin left over, what has been paid and what is owed now — then the ledger, line by line.

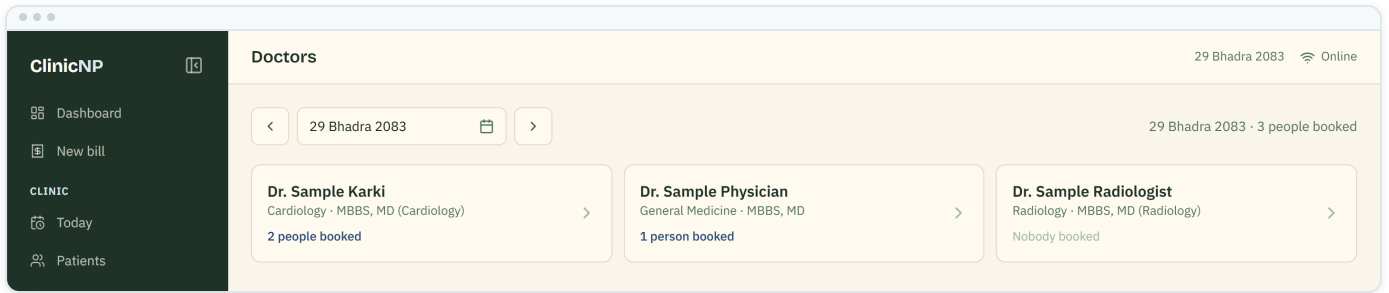

## DOCTORS Appointments, and what each doctor has earned

**Booked, arrived, seen**  
an appointment becomes a visit in one keystroke when the person turns up

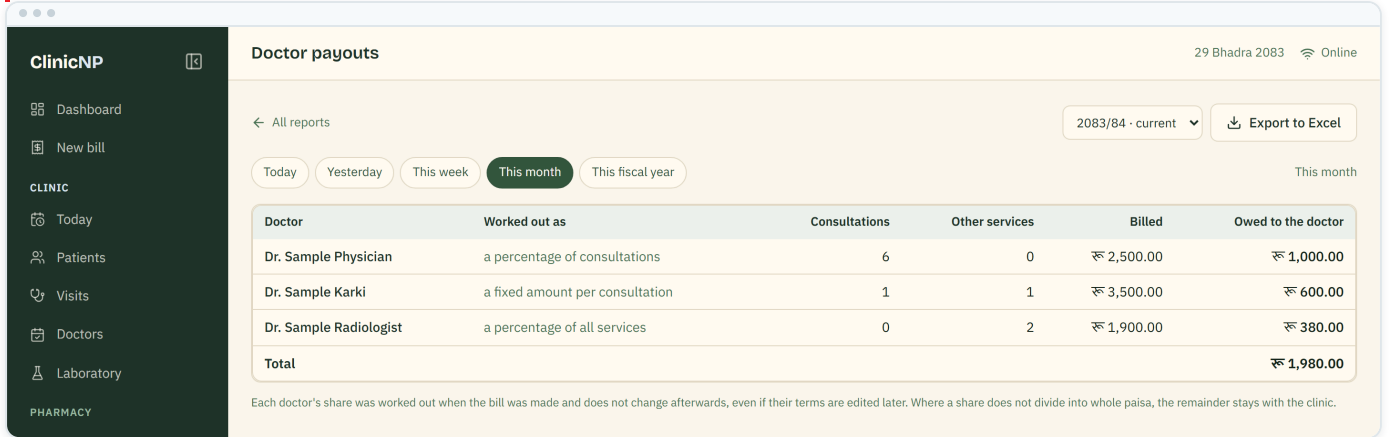

**The doctor is told**  
a booking reaches their phone as an alert, and their email when that is switched on

**Four ways to share**  
nothing, a percentage of the consultation, a fixed amount per consultation, or a percentage of listed services

**The payout sheet**  
calculated per line as it is billed, totalled per doctor, exported for the month

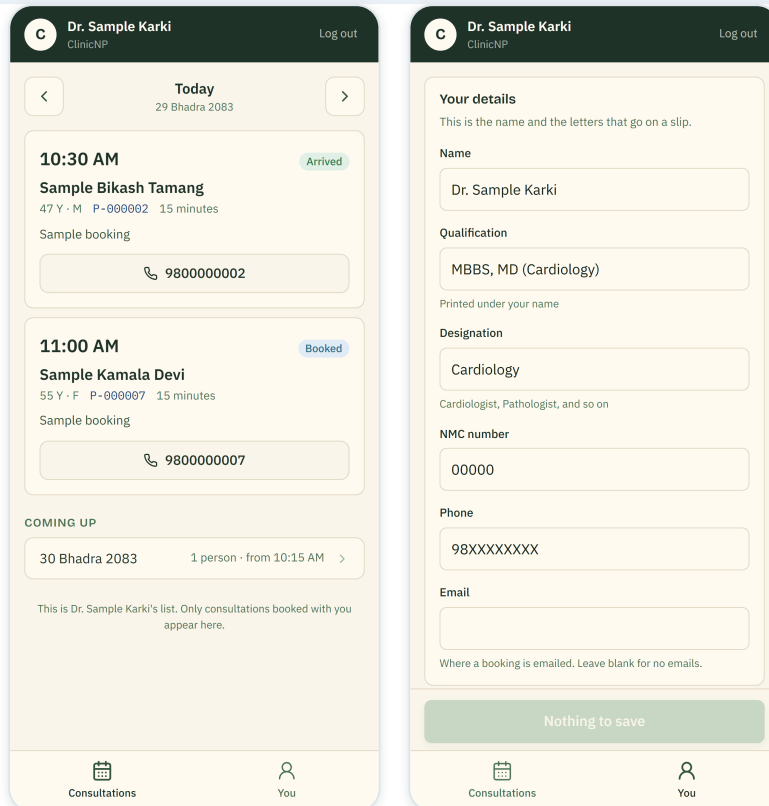

The appointment book — who is coming, when, and which of them has already arrived.

Doctor-wise revenue and the share each has earned, worked out from their own share basis.

**The doctor's own screen.** A doctor is not a counter user. Given a login of their own they get their own small tree, built for one hand on a phone: the people booked with them today, each with a number that dials, and their own profile. The counter, the stock and the reports are not theirs to see, and the server enforces that rather than the menu.

The doctor's two screens, at the size they are actually used: today's consultations with the patient's age, number and phone, and what the clinic holds about them.

PHARMACY

# Stock that watches itself

## Batch and expiry, always

stock is held per batch, and what is near expiry or already expired is a screen, not a memory

## Stock out with a reason

returned to supplier, expired, damaged, lost, used in the clinic, given as a sample, or a counted correction

## Warned before it matters

low stock, near expiry at thirty, sixty or ninety days, and expired held back from sale

## Where it actually stands

racks and shelves drawn as a floor plan, so a new hand can be sent to the right shelf

The screenshot shows the 'Stock out' register in the ClinicNP application. The left sidebar contains navigation options for ClinicNP (Dashboard, New bill, CLINIC, Today, Patients, Visits, Doctors, Laboratory) and PHARMACY (Stock, Items). The main content area is titled 'Stock' and includes tabs for Current, Low stock, Near expiry, Expired, Stock out, Opening stock, and Shelves. The 'Stock out' tab is active, showing filters for Today, Yesterday, This week, This month (selected), and This fiscal year. A 'Value by reason' summary shows: Returned to supplier (₹ 31.00, 1 entry), Damaged or broken (₹ 12.40, 1 entry), Used in the clinic (₹ 6.00, 1 entry), and Total (₹ 49.40). Below this is a table with columns: Number, Date (BS), Reason, Supplier, Lines, Value, and By. The table lists three entries: S0-2083/84-000003 (Used in the clinic, ₹ 6.00), S0-2083/84-000002 (Damaged or broken, ₹ 12.40), and S0-2083/84-000001 (Returned to supplier, ₹ 31.00).

The stock-out register — the number an owner actually wants: what did I lose this period, and to what?

The screenshot shows the 'Current' stock view in the ClinicNP application. The left sidebar is the same as the previous screenshot. The main content area is titled 'Stock' and includes tabs for Current, Low stock, Near expiry, Expired, Stock out, Opening stock, and Shelves. The 'Current' tab is active, showing three summary boxes: STOCK AT COST (₹ 1,392.00), STOCK AT SELLING RATE (₹ 2,006.00), and EXPECTED MARGIN (₹ 614.00). Below these is a table with columns: Item, In stock, Nearest expiry, and Value at cost. The table lists two items: Sample Amoxicillin 500 (10 Box + 6 Tablet, ₹ 909.00) and Sample Paracetamol 500 (79 Strip + 4 Tablet, ₹ 483.00).

Current stock, by item and batch, with the expiry that decides whether it is an asset.

The screenshot shows the 'Shelves' view in the ClinicNP application. The left sidebar is the same as the previous screenshots. The main content area is titled 'Stock' and includes tabs for Current, Low stock, Near expiry, Expired, Stock out, Opening stock, and Shelves. The 'Shelves' tab is active, displaying a floor plan diagram of the pharmacy layout. The diagram shows 'Sample Rack 1', 'Sample Rack 2', and 'Sample Front Desk'. Below the diagram is a text box that says 'Click a shelf to see what is on it, or to put something there.' and a footer that says 'Everything has a place. Nothing left to put away.'

The shelf map. Racks, desks and shelves laid out as the room really is, with a medicine's place highlighted when you search for it.

Purchase return

New purchase

| Purchase no. | Supplier              | Their invoice | Date       | Total    |
|--------------|-----------------------|---------------|------------|----------|
| PUR-1        | Citizen Pharma Sample | SMPL-INV-4471 | 2083-05-19 | ₹ 698.00 |

Stock coming in against a supplier invoice, each line landing on its own batch with its own cost and expiry.

## BILLS Every sale, and what happened to it

- The register

every bill in the period, its patient, its payment method and its state
- Reprint whenever

the same bill, from the same record, months later
- Returns and refunds

medicines go back to stock; a service refund adjusts the money and prints a note
- Cancelled, never deleted

a cancelled bill stays visible to the owner, with who cancelled it and when

The bill register, with the fiscal-year selector and an export.

## REPORTS

# The questions an owner actually asks

Every report takes a BS date range with presets, a fiscal-year filter that reaches closed years, and an export to Excel. All of them are readable on a phone.

### CLINIC

#### Service revenue

by group and by service — what did the ultrasound machine earn?

#### Doctor payouts

revenue and calculated share per doctor

#### Laboratory statements

billed, partner cost, margin, paid, owed

#### Patient visit register

the paper day-register, replaced

#### New vs returning

registrations, repeat visits, and who has not come back

#### Diagnostics utilisation

count per modality per BS month

#### The report shelf

billed tests whose report has not been filed yet

### PHARMACY & MONEY

#### Day close

collection by method across both halves; expected cash in the drawer

#### Sales register

every bill in the range, with its lines

#### Profit by item

sold against what it cost

#### Purchase register

what came in, from whom, at what cost

#### Stock valuation

what is on the shelf, and what it is worth

#### VAT summary

when the company is registered for it

#### Expiry & moving items

what is dying on the shelf, and what never moves

#### Stock-out register

value lost, grouped by reason

29 Bhadra 2083

Sales

|              |            |
|--------------|------------|
| Bills issued | 6          |
| Gross sales  | ₹ 7,613.00 |
| Discounts    | ₹ 0.00     |
| Returns      | - 0.00     |
| Net sales    | ₹ 7,613.00 |

Where it came from

|               |            |
|---------------|------------|
| Medicines     | ₹ 63.00    |
| Consultations | ₹ 1,500.00 |
| Diagnostics   | ₹ 2,950.00 |
| Laboratory    | ₹ 3,100.00 |
| Together      | ₹ 7,613.00 |

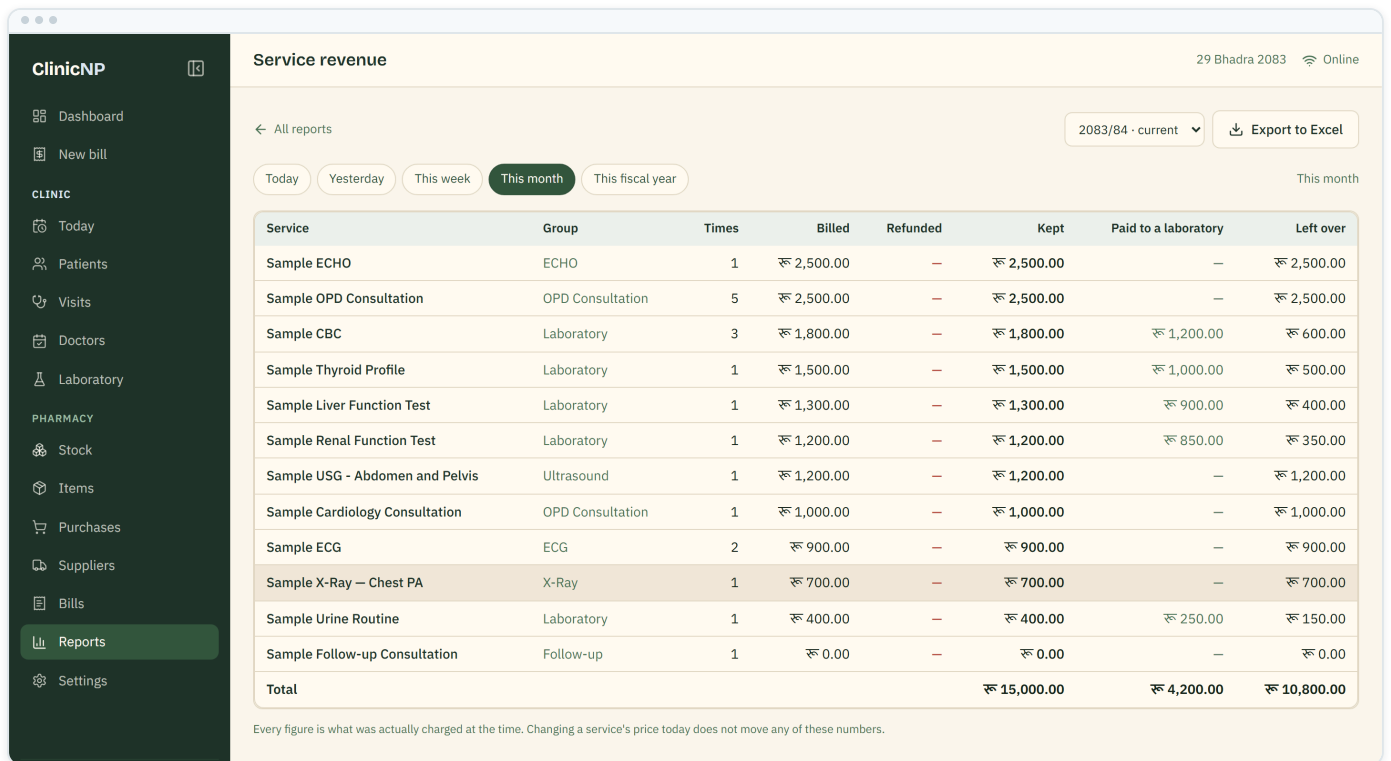

These four add up to the net sales figure, with refunds already taken off each one.

By payment method

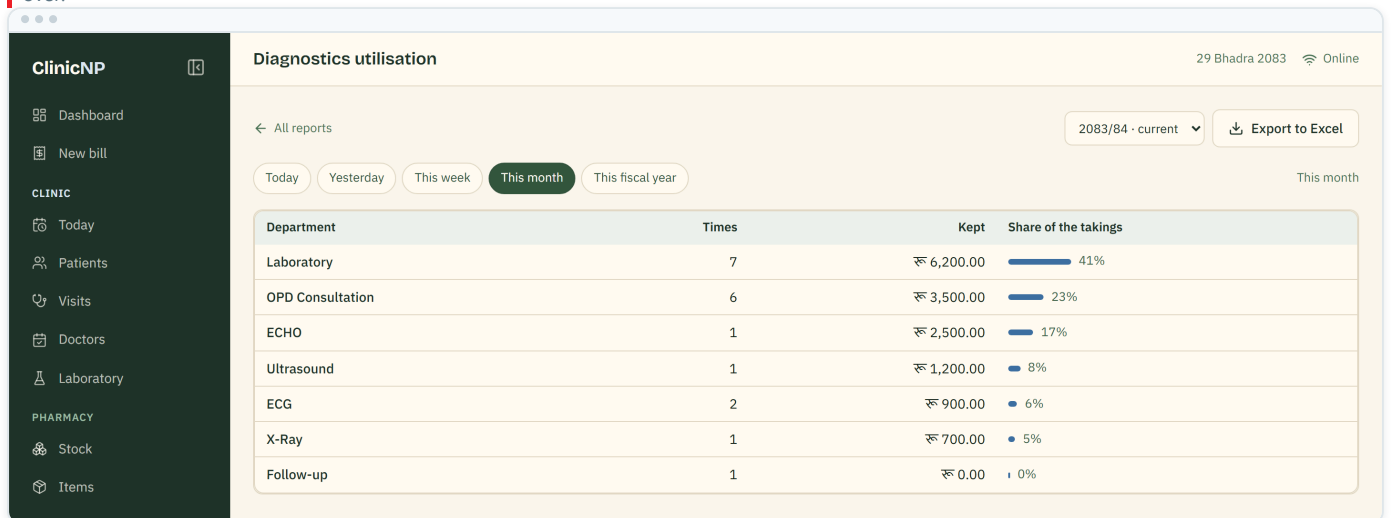

|             |            |
|-------------|------------|
| Cash        | ₹ 2,813.00 |
| QR / wallet | ₹ 4,800.00 |
| Credit      | ₹ 0.00     |

Expected cash in drawer ₹ 2,813.00

Day close — the one report that gets read every evening.

Service revenue, service by service: how many times, what was billed, what was refunded, what was kept, what went out to a laboratory, and what was left over.

Diagnostics utilisation — count per modality per BS month, so an owner can see whether a machine is paying for itself.

Net total: ₹ 15,019.00

The sales register, line by line, for the accountant.

## SETTINGS Everything configured, nothing hard-coded

- Services are yours to define

name, short code, group, rate, whether a doctor is required, whether it goes to an outside lab, what it costs you there, whether it keeps a file, and the follow-up rule
- Modules are a real boundary

a switched-off half has its screens, its menu and its server routes gone — not merely hidden
- Fiscal years, closed properly

one open year, a guided rollover that takes a backup first, and closed years that stay readable and print unchanged
- Signed and logged

every override, cancel, merge, deletion and year close carries a name and a time

Modules

Switch off a part of the system you don't use. Nothing is ever deleted — switching it back on brings everything back exactly as it was.

**Pharmacy**
Medicines, batches and expiry, purchases, suppliers, stock and the medicine lines at the counter.

**Clinic**
Patients and their visits, services and doctors, report files, and the service lines at the counter.

The module switch. At least one half has to stay on, and turning one off never deletes its data.

Fiscal years

One year is open at a time. Closed years stay readable and printable forever — they just can't be changed.

Close 2083/84 and start 2084/85

| Year    | Status              | Next invoice number | Closed on |
|---------|---------------------|---------------------|-----------|
| 2083/84 | Open — current year | 14                  | —         |

Fiscal years, and the guided year-end rollover.

ACCESS

## Four roles, checked on the server

Roles are enforced on the server for every read and every write, not merely hidden in the menu — a role that may not see a screen may not reach its data either. Login is by username and password; a shared counter device can switch between staff on a four-digit PIN, and repeated wrong attempts lock the account out.

|                                                  | Owner | Counter                       | Accountant | Doctor |

### Owner

the whole system, every fiscal year, and everything that changes money or people

### Counter

bills, patients, visits and samples — the day's work, and nothing that rewrites history

### Accountant

read-only: every report, every fiscal year, including closed ones

### Doctor

their own booked consultations and nothing else — a separate tree, not the back office made narrow

Audit log

Everyone who can sign in. A doctor signs in to their own booked consultations and nothing else — attach the sign-in to them under Doctors once it is made.

Add user

| Name             | Username | Role   | Rate edit | PIN | Status |      |            |
|------------------|----------|--------|-----------|-----|--------|------|------------|
| Bikash (Counter) | bikash   | Staff  | Yes       | Set | Active | Edit | Deactivate |
| Dr. Sample Karki | karki    | Doctor | No        | —   | Active | Edit | Deactivate |
| Sarita (Owner)   | admin    | Admin  | Yes       | Set | Active | Edit | Deactivate |

Users, their roles, whether they may edit a rate, and whether they hold a counter PIN.

## What prints

### The invoice, on A4

from an ordinary office printer, under your own letterhead — marked TAX INVOICE when you are registered for VAT

### The OPD slip

patient, visit number, doctor and complaint, with a large empty area for the doctor's handwriting — the paper the patient carries in

### The lab dispatch slip

tests, referring doctor, partner laboratory and a sample-collection line; goes with the sample

### Refund and stock-out notes

on an 80 mm roll, with a signature line

All of it through the browser. No drivers to install.

## When the internet stops

### Bills still leave the counter

held in an outbox and sent the moment the line comes back

### Patients can still be registered

numbers are assigned without collision, even from two devices at once

### Search still answers

the catalogue and the patient list are cached on the machine

### Installs like an app

on the counter machine, a tablet, or the owner's phone

## Keeping it safe

### Backup and restore

on demand, and automatically before a year is closed

### Reports are private

files are served only through an authenticated route — never a public link

### An activity log

overrides, cancels, merges, deletions, restores and year closes, each with a name and a time

### Passwords and PINs hashed

with a lockout after repeated wrong attempts

The activity log.

## What it comes down to

### One counter, one bill, one set of books

the consultation, the scan, the tests and the medicines on a single invoice

### The partner laboratory, fully accounted

billed, cost, margin, paid, owed — per partner, per period, exportable

### The owner's questions answered on a phone

what did I collect, what did the machine earn, what does the lab owe me

### No sample lost between two people

five stamped stages, a dispatch slip, and a chased list of what has not come back

### A patient found in seconds, for years

one lifetime number, every visit and every report on one card

### It keeps working when the line drops

and catches up by itself

### → What a demonstration looks like
